

DBR AI LEVERAGE LAB · FULL-COLOR FIELD EDITION

Perception vs. Perspective

A field guide to ethical influence, paradigm shifts, and trust-based leadership.

INSIDE THIS FIELD GUIDE

Built to turn clear ideas into useful, responsible action.

A field guide to ethical influence, paradigm shifts, and trust-based leadership. This edition preserves and organizes the supplied training material into an easy-to-study magazine experience.

01 · FIND THE SIGNAL

Use the source guidance to identify the ideas, prompts, examples, and decisions that can improve your next workweek.

02 · APPLY WITH JUDGMENT

Review all client-facing language, validate relevant facts, and keep human responsibility in every important decision.

03 · TURN IT INTO A HABIT

Take one useful idea from this guide and make it part of a repeatable rhythm rather than a one-time experiment.

32 · MAGAZINE PAGES

Designed for online reading, printing, discussion, and action inside the DBR AI Leverage Lab library.

The Intelligence Advantage

Perception vs. Perspective The Master Class on Ethical Influence, Paradigm Shifts & Recruiting

See the whole board. Shift the frame. Earn the trust.

A FIELD TRAINING GUIDE · SECOND EDITION Sales & Leadership Development

Field Training Guide — Second Edition Page 1

Perception vs. Perspective · The Intelligence Advantage

How to Use This Guide This is not a book to read once. It is a training manual to run a team through — section by section, drill by drill, until a new way of seeing becomes automatic.

Read it in three passes. First for the idea, second to mark the drills you'll run with your team, third to lift the scripts straight into the field.

Teach it as weekly modules. Each numbered Part is a stand-alone training session of 20– 40 minutes. Run one a week and the twelve Parts become a full quarter of leadership and sales development.

Anchor it in one rule. Everything here serves a single standard: understand the other person so completely, and so honestly, that you can serve them better than anyone else in the room — and help them see a bigger picture than they walked in with. That is the whole game.

Field Notes 02

A word on ethics — read this first The techniques in this guide are powerful. In financial services they are also governed by a duty of care to the client. Influence used to help a person make a decision that is genuinely good for them is leadership. The same skill used to push someone toward what is good only for you is manipulation — and in our industry it is also a compliance and fiduciary failure. This guide is written entirely for the first use. Shifting someone's paradigm is the most powerful tool in here; it is also the one most easily abused. Use it to give people a truer, larger view — never a false one.

The rare operator — the elite salesperson, the great leader, the skilled negotiator — has learned to do something different. They can step outside their own eyes and look at the situation from the outside, including looking at themselves. That earned, deliberate vantage point is called perspective. This Part defines both with precision, because the entire guide is built on the difference.

Field Training Guide — Second Edition Page 4

Perception vs. Perspective · The Intelligence Advantage

Part 1 — The Distinction That Changes Everything Most people go their whole lives without noticing the single most important fact about how they see the world: they are looking out from inside it. They are the star of their own show. Every event gets interpreted by what it means for them. This default setting is called perception, and it feels so natural that people never question it.

Field Notes 05

Perception: The Default Haze Definition. Perception is your automatic way of seeing, built from your five senses, your past, your biases, and your assumptions. It is centered on “me”: how does this affect my goals, my comfort, my story?

Perception is comfortable. It is why we enjoy movies and sitcoms — we get to watch a story unfold safely, from inside our own head. But comfort has a cost. Because perception runs on fixed internal scripts, it is predictable. If someone understands your background and your triggers, they can forecast your reactions, your objections, and your emotional swings with surprising accuracy. A person living entirely in perception is, in any contest of influence, the easiest person in the room to read.

Perspective: The Strategic Outside View Definition. Perspective is the deliberate ability to view a situation — or yourself — from an outside, objective position, including through the eyes of the other people involved. It is based on observed fact, not on how you feel.

Perspective is work. It does not come for free; you have to choose it, and at first you have to force it. The payoff is enormous. When you can see the table through the eyes of every person at it, you stop being a predictable participant and become the person who can shape the outcome — usually by finding the arrangement that genuinely works for everyone.

The most common mistake students make

Field Training Guide — Second Edition Page 5

Perception vs. Perspective · The Intelligence Advantage

Field Notes 06

People constantly say “From my perspective...” when what they actually mean is “From my perception.” If it is coming from your eyes and your feelings, it is not perspective — it is just your limited view of the room. True perspective begins the moment you stop narrating from inside your own head and start observing from outside it.

The Two Operating Systems at a Glance
Attribute Perception
(default) Perspective (trained)

Nature Natural, automatic, effortless
Deliberate, disciplined, earned

Based on Feelings, bias, assumption
Facts, observation, evidence

Center “Me” — the star of the show
The whole board — every player's view

Predictability High — easy for others to read
Low — you introduce new variables

Result Predictable and easily led
Unpredictable, with real leverage

So what? Perception is a cage built out of your own limits.
Perspective is the door. Everything that follows is a method for walking through that door on purpose, every time, until it becomes who you are.

Field Training Guide — Second Edition Page 6

Perception vs. Perspective · The Intelligence Advantage

Part 2 — Why Perspective Is Your Edge (The Evidence)
This is not folk wisdom. The advantage of perspective over emotion-based connection has been measured directly, and the result is one of the most useful findings in all of negotiation research.

Perspective-taking beats empathy at the table
In a landmark set of studies, Adam Galinsky and colleagues put negotiators into two camps. One was told to take the other side's perspective — to actively think about what the counterpart was thinking and what was motivating them. The other was told to empathize — to focus on the counterpart's feelings.

Field Notes 07

The finding Perspective-taking made negotiators measurably better. They uncovered hidden deals, created more total value, AND claimed more for themselves. Empathy did not produce the same advantage — and at times it backfired, because empathizers became so concerned with making the other party happy that it cost them the deal or their own outcome. Galinsky's summary: "Negotiators give themselves an advantage by getting inside the other person's head... empathizing makes you more concerned about making the other party happy, which can sometimes come at your own expense."

Sit with what that means. The instinct most sales training drills into you — "build rapport, feel what they feel" — is not the highest-leverage move. Understanding the other person cognitively, mapping what they want and why, is what actually finds the agreement.

Why this is good news, not cynical news Notice the part people skip: perspective-takers didn't just claim more — they created more total value and discovered deals that satisfied both sides. Seeing through the other person's eyes is the fastest way to find the outcome that is genuinely good for them, which in our business is the only kind of outcome that builds a career, a reputation, and a renewal.

Field Training Guide — Second Edition Page 7

Perception vs. Perspective · The Intelligence Advantage

Part 3 — The One-Way Mirror: Information Asymmetry The master mental model for perspective is the one-way mirror — the interrogation-room glass you've seen in a hundred films. It captures, in one picture, the gap between the two operating systems.

Two views of the same room Inside the room (perception)
Behind the glass (perspective)

Sees three walls and a mirror Sees both rooms at once

Believes they have privacy / control Holds an expanded view of the whole scene

Believes they have privacy / control Holds an expanded view of the whole scene

Leaks information, assuming no one is Quietly observes reactions, stress, and watching patterns

Reactions are limited and predictable Can analyze from multiple angles before acting

The point is not surveillance. The point is the gap between what you understand and what the other person assumes you understand. That gap — information asymmetry — is where every advantage in influence lives. The person behind the glass isn't smarter; they simply chose a position that lets them see more.

How to stand behind the glass when you're alone In real life there is no team behind a mirror. You build the same expanded view yourself by deliberately running the scene through more than one set of eyes:

- Their eyes: What does this person need to have happen in the next ten minutes to feel like the meeting went well?
- A neutral observer's eyes: If a stranger watched a video of this with the sound off, what would they say is really going on?
- A competitor's eyes: How would someone trying to win this account read the same signals?
- Your own eyes from outside: How am I coming across right now — not how do I feel, but how do I look from their chair?

Drill. Before your next important conversation, write one sentence for each of the four viewpoints. Two minutes. You walk in with a map nobody else has.

Field Training Guide — Second Edition Page 8

Perception vs. Perspective · The Intelligence Advantage

Field Training Guide — Second Edition Page 9

Perception vs. Perspective · The Intelligence Advantage

Field Notes 09

Part 4 — Objective Observation: Facts Over Feelings

Perspective runs on observed fact. The discipline that makes it possible is the ability to turn down your own emotional reaction and turn up your attention to what is actually happening. Three words get confused here all the time.

Empathy, sympathy, perspective Term What it is What it costs / gives

Empathy Understanding another's feelings Useful for rapport; doesn't, by itself, (e.g., a friend's pet died) find the deal

Sympathy Feeling the pain alongside them High emotional cost; pulls you into their position and erodes judgment

Perspective Viewing from outside, mapping Fact-based; powers prediction and what they think and want finds win-win agreements

Empathy and sympathy are about feeling. Perspective is about observing. You do not need to feel a car salesperson's stress to predict their behavior — you only need to see it clearly. In a high-stakes conversation, emotional flooding is noise; observation cuts through it.

Important balance. This is not a license to be cold. Warmth and genuine care are part of being a trusted advisor, and clients can tell the difference. The skill is to feel WITH people while still being able to step back and see clearly — to keep one foot behind the glass even while your heart is in the room.

Field Notes 10

The raw data you actually track

- Speed and rhythm of speech — speeding up or going flat often signals anxiety, or a rehearsed script being deployed.
- Respect for time — how they treat the clock tells you the real power dynamic and their urgency.
- Engagement vs. distraction — eye contact versus glancing at the phone is a live read on whether you have them.
- Body language shifts — changes from their normal posture, not any single pose, are the signal worth noting.

Reality check — don't oversell "reading" people

Field Training Guide — Second Edition Page 10

Perception vs. Perspective · The Intelligence Advantage

Pop culture promises that a crossed arm or a glance left means someone is lying. The research is blunt: there is no single reliable tell for deception, and confident "body- language reading" is mostly an illusion. What actually has modest value is (1) establishing a person's baseline — how they normally talk and sit — and then (2) noticing clusters of changes from that baseline, in context. So observe humbly. Treat every read as a hypothesis to test with a question, never a verdict.

Field Training Guide — Second Edition Page 11

Perception vs. Perspective · The Intelligence Advantage

Part 5 — Reading Patterns, Scripts, and Talking Points Under pressure, people fall back on scripts — the same phrases, the same safe answers, the same "bottom line" they are programmed to protect. Once you can hear the script underneath the words, you can predict where a conversation is going — and guide it somewhere better.

Field Notes 11

The presidential-debate tell Watch any high-level debate with this lens. The participants rarely answer the question asked. They pivot to a pre-loaded tagline, a punchline, a rehearsed talking point. That pivot is the pattern. The same happens in your meetings: a prospect who keeps returning to "I just need to think about it," or a colleague who always steers back to "that's not in the budget," is showing you their fallback script.

What to listen and watch for

- Verbal tics — the filler that spikes when someone is stalling or stressed.
- Taglines and punchlines — the rehearsed phrases someone returns to when they want to steer back to safe ground.
- The fallback — the talking point a person retreats to the moment they lose control of the conversation.
- The bottom line — the one outcome they are quietly protecting beneath everything else they say.

The Talking-Point Count — a training drill Next time you watch an interview or debate, ignore the content completely. Just tally how many times the speaker returns to a pre-planned line. You'll be stunned. The exercise breaks the "perceptive haze" — instead of getting pulled into what they're saying, you start seeing the machinery of how they say it. Run the same count, silently, in your next sales meeting.

Field Training Guide — Second Edition Page 12

Perception vs. Perspective · The Intelligence Advantage

Field Notes 12

Part 6 — Paradigm Shifts: How Perception Actually Changes

We've named the two ways of seeing. Now the practical question every leader and recruiter has to answer: how do you actually move a person from a small perception to a bigger one? The phenomenon has a name — the paradigm shift — and the best influencers are masters of engineering it, honestly.

6.1 What a paradigm is — and why facts alone don't move people A paradigm is the set of rules and boundaries a person sees the world through. It does two jobs at once: it tells them how to succeed inside the frame, and — this is the part that matters — it filters what they are able to see at all.

The futurist Joel Barker took the word "paradigm" out of science and made it the central idea of business foresight, through his book *Paradigms: The Business of Discovering the Future*, its predecessor *Future Edge*, and his 1988 film *The Business of Paradigms* — for years the best-selling business video ever made. (Note for accuracy when you teach this: the term's modern meaning comes from philosopher of science Thomas Kuhn; Barker is the one who carried it into business.)

Field Notes 13

The Paradigm Effect Barker's sharpest insight: we do not see data that does not fit our paradigm — it gets filtered out before we are even aware of it. This is why facts alone rarely change a mind. When you pile on more reasons, a person's frame simply screens them out. The frame is doing exactly what frames do. His other famous line — “When a paradigm shifts, everyone goes back to zero” — means past success guarantees nothing once the rules change. That single idea is pure recruiting gold, and we'll use it below.

6.2 The subway: a paradigm shift in ten seconds The cleanest demonstration ever written belongs to Stephen Covey, in *The 7 Habits of Highly Effective People*. (It is often misattributed to Barker — get the credit right and you'll look sharper than the people you learned it from.)

Covey is on a quiet Sunday subway. A man boards with children who are loud, wild, grabbing people's newspapers. The father just sits there, eyes closed, doing nothing. Irritation builds across the car. Finally Covey says, “Sir, your children are disturbing people — could you control them a little more?” The man looks up as if seeing the scene for the

Field Training Guide — Second Edition Page 13

Perception vs. Perspective · The Intelligence Advantage

first time and says softly: “We just came from the hospital where their mother died about an hour ago. I don't know what to think, and I guess they don't know how to handle it either.”

Field Notes 14

What just happened Same children. Same noise. Same facts. One new piece of information arrived, and the entire scene reorganized — irritation became compassion, instantly, with zero argument. Covey didn't get persuaded or out-debated. His paradigm shifted, and because he saw differently, he felt and behaved differently. That is the whole mechanism of influence in one story.

6.3 Why you cannot argue someone into a shift Because the paradigm filters your argument out (see 6.1). The harder you push facts, the more the frame defends itself. You shift a paradigm not by debating but by supplying something the old frame cannot absorb:

1. A new piece of information the old frame can't explain away — the subway revelation. 2. A lived experience — letting them feel the new reality rather than hear about it. 3. A story — which is experienced rather than argued, so it slips past the filter that blocks assertions.

The rule. Assertions get filtered. Anomalies and stories get through. Stop adding reasons; start delivering the one thing their current frame can't account for.

6.4 Engineering the shift — for recruiting A prospect's paradigm usually sounds like: "I have a job and a career. This is how income works — I trade hours for money. People like me don't do what you're describing." That frame filters out your opportunity before you finish your sentence. So don't push harder against it.

Field Notes 15

- Enter their frame first (perspective). Understand what they actually want and what their current path can never give them — uncapped income, ownership, time freedom, a legacy.
- Deliver the anomaly as a question or a peer's story. "Have you given up on the idea of ever owning the thing you build?" lands where a pitch bounces off. A story about someone just like them who broke through does what a brochure cannot.

Field Training Guide — Second Edition Page 14

Perception vs. Perspective · The Intelligence Advantage

- Use "back to zero." Name that the rules of income and distribution are shifting. Their old playbook isn't wrong — it's from a paradigm that's changing. Joining isn't abandoning who they are; it's getting ahead of the shift.

6.5 Engineering the shift — for leading and coaching A struggling rep is almost always trapped inside a paradigm: "I'm not a salesperson." "This market is dead." "I tried, it doesn't work for me." You will not pressure them out of it — pressure makes the frame defend itself harder. You supply a reframe.

Field Notes 16

•Use their own contradicting data. One result that their story says shouldn't exist cracks the frame open faster than any pep talk. •Use a mirror-image peer. Someone who shared their exact limitation and broke through is a living anomaly the old story can't explain. •Ask the frame's edge into view. "What would have to be true for this to work for you?" forces them to articulate — and then question — their own boundary. •Run the subway habit. When a teammate frustrates you, assume there's a subway story you can't see. Ask before you judge. That one habit, practiced daily, will change your leadership more than any technique in this guide.

The leader's paradigm-shift toolkit Story over statistic. Question over command. Anomaly over argument. Curiosity over judgment. When you feel the urge to push harder, that is the signal to stop pushing and change the frame instead.

Field Training Guide — Second Edition Page 15

Perception vs. Perspective · The Intelligence Advantage

Part 7 — The Seven Traps: How Perspective Fails Everything so far teaches the skill — how to take perspective and how to shift a paradigm. This Part teaches the failure side: what goes wrong inside a leader's head when the skill is absent. For that we turn to historian and national-security scholar Zachary Shore, whose book *Blunder: Why Smart People Make Bad Decisions* catalogs seven "cognition traps" — rigid ways of thinking that quietly stop a person from seeing a situation clearly. Fittingly for our thread, Shore comes from the same intelligence-and-strategy world as the spies and the negotiators.

The seven cognition traps Trap What it is Field warning

Field Notes 17

Exposure Anxiety Fear of looking weak or You harden a bad position just indecisive to avoid looking like you backed down

Causefusion Confusing the causes of a You “fix” the wrong thing complex event because you misread why it happened

Flat View Seeing the world in one You miss the angles a person dimension behind the glass would see

Cure-Allism Believing one solution fits every Your one favorite script gets problem forced onto situations it doesn't fit

Infomania An obsessive, hoarding You gather endlessly and still relationship to information never decide or act

Mirror Imaging Assuming the other side thinks You project your own motives like you do and completely misread theirs

Static Cling Refusing to accept You run yesterday's playbook in circumstances have changed a market that already moved

Shore illustrates each with vivid history you can teach from — Edison clinging to direct current long after the world moved to alternating current (Static Cling), and Cold War misreads where each side assumed the other thought as it did (Mirror Imaging).

Three traps that are the exact opposite of this guide

Field Training Guide — Second Edition Page 16

Perception vs. Perspective · The Intelligence Advantage

You don't need all seven to feel the value. Three of Shore's traps are precise, named failures of the very skills the rest of this guide builds:

Field Notes 18

▪Mirror Imaging is the failure of perspective. “They think like I do” is exactly the error Galinsky’s research (Part 2) shows costs negotiators the deal. The antidote is perspective-taking — running the four viewpoints from Part 3. ▪Static Cling is the failure of the paradigm shift. It is Barker’s “everyone goes back to zero” (Part 6) stated as a personal flaw — clinging to a frame after the rules have changed. The antidote is to hunt for the anomaly your own frame can’t explain. ▪Flat View is life inside the room. One-dimensional seeing is the trapped, three-walled perception of Part 3 — the opposite of the multi-angle view from behind the glass.

The antidote is the rest of this guide Shore’s own prescription for escaping the traps — mental flexibility, empathy, imagination, contrarianism, and an open mind — is simply perspective and paradigm- shifting by another name. Teach the seven traps as the diagnosis, and the rest of this manual as the cure. When you catch yourself hardening a position, projecting your motives onto someone, or running an old playbook, name the trap out loud — naming it is the first step out of it.

Field Training Guide — Second Edition Page 17

Perception vs. Perspective · The Intelligence Advantage

Part 8 — The Ethical Influence Toolkit Perspective tells you where a person is. A paradigm shift changes what they can see. Influence is how you help them take the step. These are the most evidence-backed tools we have; used in service of the other person, they are simply good communication made deliberate.

Field Notes 19

Tactical empathy: Voss's three core moves Chris Voss spent 24 years as the FBI's lead international kidnapping negotiator. His core idea — tactical empathy — is understanding the other side's emotion and the thinking behind it, out loud, so you increase your influence in every moment that follows. Three moves carry most of the weight:

1. Mirroring. Repeat the last one to three words they said, with genuine curiosity and a slight upward tone — then go quiet. The silence pulls more out of them. 2. Labeling. Name the emotion you're observing: "It sounds like this timing feels risky." Naming a feeling defuses it and proves you're listening. Use "It seems / it sounds like," never "I understand." 3. Calibrated questions. Ask open "How" and "What" questions that hand them the problem to solve: "How would this need to work for it to make sense for your family?"

Cialdini's seven principles of persuasion Robert Cialdini's principles describe the levers that move human decisions. The rule: use them to make a good decision easier, never to make a bad decision look good.

Principle What it is Honest use in the field

Reciprocity We feel pulled to return value Lead with genuine help before we've received any ask

Commitment & We act in line with our earlier Get agreement on the goal first; Consistency small "yes" let the plan follow

Social Proof We look to others like us to lower Share real stories of similar risk people — never fabricated

Authority We defer to credible expertise Earn it: know your craft cold, show credentials honestly

Liking We say yes to people we like and Find true common ground; be

Field Training Guide — Second Edition Page 18

Field Notes 20

Perception vs. Perspective · The Intelligence Advantage

Principle What it is Honest use in the field

trust genuinely likable

Scarcity We value what is rare or time- Only ever cite real deadlines and bound real limits

Unity We're moved by shared identity Speak to the team, family, or ("one of us") community you both belong to

The bright line Every tool above can be turned toward manipulation — fake scarcity, manufactured social proof, false authority. In financial services that isn't just unethical; it's a compliance and fiduciary violation that ends careers. The test is simple, and you already know the answer in your gut: Would this person thank me if they could see everything I see? If yes, proceed. If no, stop.

Field Training Guide — Second Edition Page 19

Perception vs. Perspective · The Intelligence Advantage

Part 9 — The Voss Playbook: "No," "That's Right," and the Audit Part 8 covered tactical empathy. This Part adds the moves that make Voss uniquely valuable to anyone who has to lead and recruit without authority — which is exactly your situation. You don't command a distributed salesforce; you influence it. These four tools are how.

8.1 The power of "No" Most selling chases "yes." Voss flips it. People feel trapped saying yes and safe saying no — "no" gives them autonomy and a feeling of control, which lowers their defenses. So stop hunting for yes. Engineer no-oriented questions where the answer that moves you forward is "no."

Instead of (yes-hunting) Ask (no-oriented)

"Do you have a few minutes?" "Is now a bad time to talk?"

"Do you want to build something of your own?" "Have you given up on building something of your own?"

Field Notes 21

"Can I show you the opportunity?" "Would it be ridiculous to take fifteen minutes to see if this even fits?"

"Are you open to a change?" "Is it crazy to think there might be a better model than the one you're in?"

Why it works. The "no" they give protects their ego and their sense of control — and paradoxically pulls them toward you, because now they're engaging on their terms instead of defending against yours. In Voss's framing, "No" is the start of the negotiation, not the end of it.

8.2 "That's right" — the trust switch Summarize a person's situation back to them so accurately that they say "that's right." Note the exact words. "You're right" is a brush-off people use to make you stop talking. "That's right" means you have genuinely captured their world — it is perspective made audible, and it is the precise moment trust turns on.

The move

Field Training Guide — Second Edition Page 20

Perception vs. Perspective · The Intelligence Advantage

Combine a summary with a label and a no-oriented check: "So it sounds like you've built something solid, but you're capped, and part of you is wondering if there's a ceiling you just can't see past — is that right?" When they say "that's right," you've earned the right to lead the conversation somewhere new.

8.3 The accusation audit Before the other person can raise their objections, you raise them yourself — out loud. List the worst things they could be thinking about you and say them first. Crucially, you do not deny them; you simply name them, which drains their charge.

Field Notes 22

For recruiting, where skepticism is the default setting, this is disarming: “You’re probably thinking I’m just another guy with an opportunity, that this sounds too good to be true, and that I’m about to pressure you into something. Those would all be fair things to think.” Having said it for them, you’ve taken the weapons off the table and they can actually listen.

8.4 “How am I supposed to do that?” The deferential calibrated push-back. When a counterpart pushes for a term you can’t give — a comp split, a vendor price, a partnership concession — “How am I supposed to do that?” hands the problem back to them without confrontation. It keeps the relationship intact while forcing them to solve your constraint. Use it in compensation conversations and partner negotiations, not on a prospect you’re trying to recruit.

The thread you noticed — CIA and FBI It is not a coincidence that this material traces to an ex-CIA officer (the perception/perspective framing) and an ex-FBI hostage negotiator (Voss). Both disciplines reduce to the SAME skill, because both operate with zero formal authority over the other person. A case officer recruits an asset to act — voluntarily. A hostage negotiator de-escalates with no leverage at all. Neither can command; both can only influence by suspending their own paradigm and entering the other person’s. That is precisely how you lead and recruit a large, distributed, largely volunteer team. The spies and the negotiators are the purest case studies of the exact skill your role requires.

Field Training Guide — Second Edition Page 21

Perception vs. Perspective · The Intelligence Advantage

Field Notes 23

Part 10 — Field Applications Theory earns nothing until it changes a conversation. Here is the whole framework — perspective, paradigm shift, and the Voss tools — at work in the situations you live in.

9.1 The car dealership, decoded The buyer walks in on perception: “I want this car, this color, this price,” and feels in control because they chose the color. The salesperson operates on perspective — they’ve run this play hundreds of times and shape the buyer’s wants in real time, turning “I’d like leather” into “of course you’ll want it heated,” until an add-on feels like a need.

The lesson for your reps. In every transaction there’s a person on perception and a person on perspective. Our job is never to be the predator behind the glass — it’s to make sure our client is never the unwitting person inside the room. We hand them the expanded view. We are the advisor who gives them the map of the whole dealership.

Field Notes 24

9.2 Recruiting a new rep This is a paradigm-shift operation from start to finish. Open with a no-oriented question that gets engagement without pressure (“Have you given up on building something of your own?”). Enter their frame and find the anomaly their current career can’t resolve. Deliver it through a peer’s story, not a pitch. Summarize their situation until you hear “that’s right.” Run an accusation audit to clear the skepticism (“you’re probably thinking this is too good to be true...”). Then offer the “back to zero” reframe: the rules are shifting, and this is how they get ahead of it. You are not overpowering their objections — you are giving them a larger, truer picture than the one they walked in with.

9.3 Leading and coaching your team Your existing reps get stuck inside paradigms, not inside circumstances. When a rep says “this market is dead,” resist the urge to argue or push harder — that reinforces the frame. Instead supply the reframe: their own contradicting result, a mirror-image peer who broke through, or the question “what would have to be true for this to work for you?” And practice the subway habit relentlessly: when a teammate’s behavior frustrates you, assume there’s a story you can’t see, and ask before you judge. Coaching is paradigm work; the technique is everything in Part 6 and Part 9 turned inward on your own people.

9.4 The client meeting

Field Training Guide — Second Edition Page 22

Perception vs. Perspective · The Intelligence Advantage

Field Notes 25

Do honest reconnaissance — the client's situation, pressures, and what success looks like for them — then run the four viewpoints from Part 3. In the room, resist reacting to the surface of what's said; ask why it's being said. Use labeling and calibrated questions to surface the real need, and aim for the "that's right." You will often understand their situation better than they've articulated it themselves — and that is exactly when they decide to trust you.

9.5 The boardroom and the negotiation Most people enter a meeting in a haze, focused only on their own ask. The leader who enters with perspective has already modeled every stakeholder's bottom line and likely acceptance point. You can steer the group toward the outcome that serves the most people while everyone feels they arrived there on their own. When a term gets pushed that you can't give, "how am I supposed to do that?" keeps the relationship intact while handing the constraint back. That is the durable version of "controlling the conversation": not domination, but the quiet authority of the person who understood the room first.

Perception vs. Perspective · The Intelligence Advantage

Part 11 — The Practice: Drills That Build the Habit Perspective and paradigm-shifting are muscles. Assign one drill per week; review results in your team meeting.

Field Notes 26

Daily reps 1. The Observation Audit. Write three factual observations about the other person that have nothing to do with your feelings. 2. The Four Viewpoints. Before any important conversation, write one sentence each from their eyes, a neutral observer's, a competitor's, and yourself-from-outside. 3. The Talking-Point Count. During any interview or pitch, tally the rehearsed lines instead of following the content. 4. Find the paradigm. For one prospect or rep, write the single sentence that captures the frame filtering out what you want them to see. Then write the one anomaly that frame can't explain. 5. No-oriented rewrite. Take three questions you ask every week and rewrite each so the helpful answer is "no." 6. Hunt for "that's right." In one conversation, summarize the other person's world until they say "that's right." Notice what changes after they do. 7. The subway habit. Once a day, when someone frustrates you, ask "what's the subway story I can't see?" before you react.

A team exercise: the empty-chair role-reversal Put an empty chair in the room to represent a real prospect or rep. Have someone sit in it and argue that person's position — their fears, pressures, and the paradigm they're stuck in — out loud for three minutes. The team then plans the approach, including the one anomaly or story most likely to shift that frame. This is perspective-taking and paradigm- mapping made physical, and it surfaces openings the team would otherwise miss.

Perception vs. Perspective · The Intelligence Advantage

Part 12 — Standard Operating Procedure The one-page protocol for the perspective-based operator. Print it. Run it before every high-stakes interaction until it disappears into instinct.

1. Drop the haze Step out of “star of my own show

1. Drop the haze Step out of “star of my own show.” This is about them, not my narrative.
2. Run the four viewpoints Their eyes, a neutral observer’s, a competitor’s, yourself-from-outside. One sentence each.
3. Map their paradigm Name the frame filtering out what you want them to see — and the one anomaly or story it can’t explain.
4. Separate fact from feeling Track raw data as hypotheses, not verdicts. Stay warm, stay clear.
5. Open the door with “No” Ask a no-oriented question. Let them feel control. Earn engagement, not a forced yes.
6. Earn the “that’s right” Summarize their world until they confirm you’ve understood it. Then — and only then — lead.
7. Shift the frame, in service Deliver the anomaly or story, not more argument. Clear skepticism with an accusation audit if needed.

Field Training Guide — Second Edition Page 25

Perception vs. Perspective · The Intelligence Advantage

8. Apply the bright-line test Would this person thank me if they could see everything I see? If yes, proceed. If no, stop.

Field Training Guide — Second Edition Page 26

Perception vs. Perspective · The Intelligence Advantage

The Leader’s Standard Perception is the comfort of the controlled. Perspective is the hard-won tool of the person who directs. And the paradigm shift is the bridge between them — the moment one person helps another see a larger, truer picture than they could see alone. The difference is never intelligence or background. It is the decision, made again and again, to step behind the glass instead of staying trapped in the room — and to help others do the same.

Field Notes 28

For a rep, this is the edge that turns a pitch into a relationship and a transaction into a renewal. For a leader and recruiter, it is how you change what people believe is possible for their lives — which is the real work. And it carries an obligation: the more clearly you can see into another person, and the more skillfully you can shift their frame, the more responsible you are for using that power to give them a truer picture, never a false one.

The rule of the strategist If you think about the world through their eyes, you will always have the advantage. Use that advantage to shift their frame toward something truer — and you don't just win the deal or the recruit. You become the person who changed how they see.

Stop being the star of your own show. Become the director — and teach others to see.

Sources & Further Study Accurate attribution matters — especially when you teach this. The framework draws on:

Field Notes 29

Joel Barker, *Paradigms: The Business of Discovering the Future*; *Future Edge*; "The Business of Paradigms" (1988 film) — joelbarker.com Thomas Kuhn, *The Structure of Scientific Revolutions* — origin of the modern term "paradigm" — — Stephen Covey, *The 7 Habits of Highly Effective People* — the subway paradigm-shift story — franklincovey.com Chris Voss, *Never Split the Difference* — tactical empathy, no-oriented questions, "that's right," accusation audit — blackswanltd.com Galinsky, Maddux, Gilin & White (2008), "Why It Pays to Get Inside the Head of Your Opponent," *Psychological Science* — pubmed.ncbi.nlm.nih.gov/18399891 Robert Cialdini, *Influence and Pre-Suasion* — the seven principles of persuasion — cognitigence.com Zachary Shore, *Blunder: Why Smart People Make Bad Decisions* (2008) — the seven cognition traps — zacharyshore.com Research on nonverbal cues & deception (no single reliable tell; baseline + clusters) — ncbi.nlm.nih.gov/pmc/articles/PMC7667016

A note on two common misattributions The subway story is Stephen Covey's, not Joel Barker's. And the "why smart people make bad decisions" book is Zachary Shore's *Blunder* (2008), about cognition traps; the similarly titled "Why Smart People Make Big Money Mistakes" is a different, behavioral-economics book by Belsky and Gilovich. Neither is Barker. Getting these right makes you more credible, not less, when you present this material.
